

FASTEST LINE FOLLOWER

ABSTRACT:

A line supporter robot, made to follow a race track as quick as could be expected. This kind of robot is exceptionally well known and can be utilized to show a few extremely strong material science, hardware and Programing abilities and ideas while as yet being exceptionally tomfoolery and easy to make. The robot should follow the dark line. The opposition region has a unique spot characterized for the robot's activity. The real execution is a way of behaving based (brain) control with the sensors giving the sources of info. The robot can likewise be customized to find the line by pseudo-arbitrary development in the event that no line is recognized by the optical sensor.
